

WHITEBLAST™

BUILT TO CLEAN, MADE GREEN.

BLAST WITH GLASS

Block particles cuts faster & cooler, last longer, clean, bright & natural finish

ENVIRONMENTALLY FRIENDLY

No free silica, heavy metals or beryllium, inert, non-toxic & odorless

VERSATILE & SAFE

Dry & wet blasting, no impingement or embedding, no surface dust contamination

WHITEBLAST™

WhiteBlast™ is produced from post-industrial plate glass. Our 100% recycled material is chemically non-toxic, inert and environmentally friendly.

Strict measures assure a product that is silica-free, toxic and heavy metal free. A major advantage over mineral, metal and slag abrasives. Our specialized grinding process allows for a compact block like shape, a major advantage over metal slivers and slag particles.

Our product produces a clean, bright and natural finish. Dust occurring from blasting is translucent, offering no visual obstruction to the surface for the operator. Our abrasives leave no surface impingement, embedding, discoloration or odor. Safe for both indoor and outdoor applications.

Product is available in 50lb bags, Super Sack(≤3000lbs) and bulk truck.

For more information we invite you to contact us for sample and more information

SIZING & SPECIFICATIONS

Common industrial applications & custom sizes are available.

Coarse – 10x30 Mesh

Very-coarse granular mix to be used for heavy mill scale, contaminant and rust removal. Produces 3+ mil profile on steel applications.

Medium – 20x40 Mesh

Medium granular mix to be used for medium mill scale, contaminant and rust removal. Produces 2-3 mil profile on steel applications

Fine – 40x80 Mesh

Fine granular mix to be used for fine profiling and on soft metal (non-ferrous) surfaces. Produces up to 2.5 mil profile.

Extra-Fine – 80x Mesh

Extra-Fine granular mix to be used for cleaning delicate surfaces. Quality substitute in baking soda, corn starch and walnut shell applications.
